Notes on methodology**Plant production****Sources and methods of data gathering**

The data on plant production of agricultural enterprises and agricultural cooperatives are collected by regular statistical surveys with total coverage. The reported data are based on accounting and other records. The data on individual agricultural holdings are collected by estimation, which is performed by statistical estimators. They give information on the regions that are estimated, which as a rule coincide with the cadastral municipalities. The estimators are mainly agricultural experts and progressive farmers acquainted with the local conditions and trained for the purpose. The statistical offices are in continuous contact with them. The estimators perform their work on the basis of the last cadastral data, previous estimates, their own knowledge and other sources.

Scope

The data cover total capacities and the production of agricultural enterprises, agricultural cooperatives and individual agricultural holdings.

Definitions

Cultivated area refers to land area under cultivation, used for growing field crops, perennial plants and grasses, and where cultivation, harvesting and other agricultural activities are performed, producing an annual yield.

Cultivated area consists of arable land and gardens, orchards, vineyards and meadows.

Agricultural area is land area used for agricultural production (arable land and gardens, orchards, vineyards, meadows, pastures).

Arable land refers to land area where crop production takes place and which is sown with field crops: cereals, industrial crops, vegetables and fodder crops.

Fruit-bearing trees and grape-vines refer to trees and vines which by their physiological ripeness are ready to bear fruit under normal conditions for vegetation, regardless of whether they bore fruit or not in the reference year.

The yield of crops is shown as barn yield with normal humidity after deducting all losses incurred during harvest, transport and mowing.

Livestock production**Sources and methods of data gathering**

The data on the number of livestock (cattle, pigs, sheep and goats), poultry and beehives are taken from the Annual Report on the Number of Livestock in Agricultural Enterprises and Cooperatives, and the data on individual agricultural holdings are gathered by the Survey on the Number of Livestock.

Scope

Reporting units for the number of livestock in agricultural enterprises and cooperatives are the business entities which according to the National Classification of Activities are registered in section A, division 01, group 01.4, 01.5, and for the individual agricultural holdings the reporting units are a sample from the Livestock Survey. The selection of agricultural holdings (the sample) for the survey is prepared from the Statistical Register of Agricultural Holdings, comprising 625 statistical districts, or 5000 households, spread over the whole territory of the Republic of Macedonia.

Definitions

The livestock balance refers to herd coverage during the year, where changes in the number of head of livestock are registered.

Increase in livestock refers to livestock production (live weight) during the year as the result of breeding, increase and raising of livestock.

Total increase of individual types of livestock refers to the live weight of slaughtered animals, the weight difference between bought and sold heads and the weight difference of livestock at the beginning and the end of the year.

Gross weight of livestock refers to the weight of live animals before slaughter.

Net weight refers to weight of slaughtered livestock without hide, blood, head, entrails, front legs up to the knees and rear legs up to the ankles.

Rendered weight refers to the ratio between the gross and net weight, by percentage.

Notes on methodology**Fishing****Sources and methods of data gathering**

Data on total catch of fish are collected by regular annual statistical surveys for the "Annual report on catches of fish in lakes, rivers and canals" (ZE.62) and "Annual Report on Fisheries" (ZE.62.A).

Scope

Reporting units for these surveys are all units (companies, co-operatives) that purchase agricultural products directly from private producers, or sell own agricultural products, and are registered in the Agriculture, forestry and fishing sector of the National Classification of Activities - NKD.

Definitions

Total catch of freshwater fish means amounts of consumer fish caught by legal and natural persons, professionally or recreationally, in lakes, rivers and canals, and fish production in fishponds.

Fishponds are specialized facilities for growing fish for consumption, such as freshwater fish (carp and trout).

Purchase**Sources and methods of data gathering**

Data on the total purchase of agricultural products are taken from the monthly statistical surveys on the purchase of agricultural products from individual producers (trade-31) and the sales of enterprises' own produced goods (Agri-Trade - 33).

Scope

Reporting units for these surveys are all units (companies, co-operatives) that purchase agricultural products directly from private producers, i.e. sell own agricultural products, and are registered in the Agriculture, forestry and fishing sector of the National Classification of Activities - NKD.

Definitions

Purchase of agricultural products from individual producers is purchase by enterprises directly from private producers, for processing or further sale of purchased products.

Sale covers data on the sale of agricultural products from own production of agricultural companies, big holdings and other institutions.

Notes on methodology

Sources and methods of data gathering

Data are gathered through one quarterly and several annual surveys based on accounting and other records. The reports on public and private forests are provided from the public forestry enterprise, PE "Makedonski Sumi", and national parks.

Data on shot game are provided by the forestry enterprise PE "Makedonski Sumi", hunting associations, companies engaged in hunting, national parks and other legal entities engaged in game management, and they are based on estimation.

Economic principles in forestry are used as a source of the data on state and private forest areas.

In order to achieve harmonization with the EU recommendations, the former sorting method of forest area by tree species was abandoned in 2010.

Since the new sorting method has been harmonized with the Law on Forests (Official Gazette No. 64/09 from 2009), comparability to the data from previous years regarding tree species is not possible.

Scope

Data on area, establishment and care of forests, use of forests and hunting have total coverage; damages to forests include only state forests, while fire damages include state forests and forests in private property. Production of forestry assortments refers to the products from state forests of the public enterprise PE "Makedonski Sumi" and national parks, which perform continuous production of such products regardless of their main activity.

Definitions

Forest represents a forest ecosystem spanning on forest land with forest types of trees and bushes, bare lands near forests and other bare lands and meadows within forest, forest nurseries, forest roads, seed plantations, forest fire breaks, wind protection breaks/belts on area larger than 2 a, including forests in protected areas.

Gross felled timber includes technical, industrial and fuel wood, waste and losses incurred during felling.

Technical wood is defined as wood, which due to its physical and chemical properties is intended for various technical purposes.

Fuel wood is wood intended directly for heating or to produce charcoal.

Care of forests includes activities in fully-grown and nursery plant forests intended to improve the quality of trees. Protection of forests includes protection of human carelessness, illegal cutting, insect repellent, anti-plant diseases, and other means to protect forests.

Forest protection is a system of measures and activities carried out in order to ensure the survival of forests, preserve the health and vitality of forests from illegal acquisition and use, illegal logging, fires, plant diseases and pests, livestock grazing, illegal gathering of other forest products and other damage.
